22th. Apr. 2024

VITAMIN

01

According to market news, starting from April 19, DSM-Firmenich raised the price of feed-grade nicotinamide to USD5.6/KG, and market attention increased. Affected by the shortage of upstream raw materials, the delivery of niacin and nicotinamide has been tight, and upstream Less inventory.

AMINO ACID

02

Amino acid varieties are relatively stable this week. The lysine market is dominated by shipments. The factory's external quotations are strong. The overall threonine market transaction is weak, and end users are not willing to sign orders.

API

03

This week, the API market has maintained stable operation as a whole, with most varieties fluctuating at low levels, with little room for downside, and transaction prices are negotiable. The prices of some varieties are relatively strong due to supply, raw materials, etc. The factory of doxycycline is currently suspended, and the market price has risen and bottomed out. The supply of albendazole, levamisole hydrochloride and neomycin sulfate has tightened, and prices have increased slightly. Other varieties are mainly stable.

FOOD ADDITIVE

04

The overall food supplement sector maintains stable operation, and the prices of the sweetener series products sucralose/acesulfame potassium/aspartame are stable; mainstream manufacturers of creatine monohydrate are shipping normally, and some manufacturers have scheduled shipments until mid-to-late May. The current prices of major manufacturers Remain stable; the prices of preservative products sodium benzoate/benzoic acid/potassium sorbate and sorbic acid remain stable, and all manufacturers deliver goods normally. Xanthan gum has risen, some mainstream manufacturers have stopped trading, and the price has risen to USD3.2/KG. The possibility of continued growth cannot be ruled out in the long term.
